DIGITAL LITERACY PROJECT REPORT

Submitted By:

Name: Himanshu

Registration Number: 25MEI10102

Program: M. Tech

Specialization: Cyber Security

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

VIT Bhopal University
Bhopal, Madhya Pradesh

INTRODUCTION

Digital literacy is an essential competency in today's technology-driven academic and professional environment. It goes beyond the basic use of computers and smartphones and includes the ability to communicate effectively, use online platforms responsibly, protect personal data, and build a professional digital presence. In the modern world, students are expected not only to consume digital content but also to create, evaluate, and share information in a safe and meaningful way.

This project was designed to help students understand and apply core digital literacy skills through practical activities. As part of the assignment, I completed five tasks related to awareness creation, digital portfolio building, coding and collaboration platforms, professional communication, and cybercrime prevention. Each task focused on a different aspect of digital literacy and provided hands-on experience with commonly used digital tools and platforms.

The purpose of this report is to explain the approach followed in each task, present the findings and learning outcomes, and reflect on the importance of these skills in student life.

Overall, this project helped me develop a better understanding of how digital tools can support learning, communication, career growth, and online safety.

Task 1 – Digital Literacy Awareness Infographic

***Objective:**

The objective of this task was to create an awareness infographic on the topic “Digital Literacy for College Students” and to present important digital literacy concepts in a simple, visually engaging, and student-friendly format.

***Approach:**

To complete this task, I used Canva, a popular online design platform. I selected Canva because it is easy to use and provides ready-made templates, icons, fonts, and layout options that are useful for creating educational visuals. My aim was to design an infographic that would be informative yet attractive enough to quickly capture the attention of students.

While creating the infographic, I used a blue-themed layout, icons, and short bullet points to make the content easy to read and understand. I carefully selected the most relevant information and arranged it in a structured format so that students could understand the concept of digital literacy at a glance.

The infographic included five major areas:

- meaning of digital literacy,
- useful digital tools for students,

- safe internet practices,
- professional online presence,
- and email etiquette.

***Findings:**

Through this task, I understood that digital literacy is not limited to technical knowledge but also includes responsible behaviour, online communication, and digital safety. I also learned how visual communication can make educational content more engaging and easier to remember.

I found that awareness content becomes more effective when complex ideas are simplified into short, clear, and well-designed visual elements. I also observed that design choices such as colour, icons, and layout play an important role in improving readability and user interest.

***Reflection:**

This task helped me realize that digital awareness can be spread more effectively when information is presented in a visual and practical way. It also improved my ability to organize and present information creatively, which is a useful skill in academics and professional settings.

Task 2 - Digital Portfolio

***Objective:**

The objective of this task was to create or improve my professional digital presence by building profiles on academic and professional platforms that can support my learning, networking, and future career development.

***Approach:**

To complete this task, I worked on three important digital platforms:

- **GitHub**
- **LinkedIn**
- **Stack Overflow**

I selected these platforms because each serves a different purpose in a student's academic and professional journey.

On **GitHub**, I created or updated my profile and added a profile README containing my name, branch, year, and a short introduction about my academic interests. GitHub is useful for storing projects, assignments, coding files, and portfolio work.

On **LinkedIn**, I created a professional student profile and updated my educational details such as degree, institution, and expected graduation timeline. LinkedIn is widely used for professional networking, internships, and career opportunities.

On **Stack Overflow**, I created a profile to begin exploring technical communities where students and professionals ask and answer programming-related questions. Although I am still at an early stage of learning, this platform can be helpful in the future for solving doubts and improving technical understanding.

***Findings:**

This task helped me understand that a student's online presence is an important part of their professional identity. I learned that digital platforms are not only social tools but also career-building tools when used properly.

I also realized that building a digital portfolio should begin early in college, as it helps in documenting growth, showcasing work, and preparing for future academic and industry opportunities. Each platform offers different benefits, and together they can create a strong digital profile.

***Reflection:**

This task was valuable because it showed me the long-term importance of maintaining a professional and organized digital identity. As I continue my academic journey, these platforms can help me present my skills, projects, and learning progress in a structured and credible way.

Task 3 – Explore Coding & Collaboration Platforms

***Objective:**

The objective of this task was to develop professional digital communication skills by practicing formal email writing and understanding proper online etiquette.

***Approach:**

To complete this task, I wrote two formal emails based on realistic student scenarios:

1. A formal email to a professor requesting an **assignment submission extension**
2. A professional email to an internship coordinator expressing **interest in a summer internship opportunity**

While writing these emails, I focused on the key elements of formal communication such as:

- clear and relevant subject line,
- respectful greeting,
- concise and well-structured body,
- polite closing,
- and professional tone.

In addition to email writing, I also created a **Social Media Do's and Don'ts checklist** to promote responsible and respectful digital behaviour among students.

***Findings:**

This task helped me understand that digital communication is a major part of academic and professional life. I learned that formal emails should always be clear, respectful, and purpose-driven.

I also realized that poor communication, such as sending incomplete, rude, or unclear emails, can create misunderstandings and leave a negative impression. Similarly, careless behaviour on social media can affect a student's image and credibility.

***Reflection:**

This task was important because it showed me that communication skills are just as valuable as technical skills in the digital world.

Whether communicating with professors, internship coordinators, or peers, professional etiquette plays an important role in creating a positive and responsible digital identity.

Task 4 – Draft a Professional Email & Etiquette Guide

***Objective:**

The objective of this task was to develop professional digital communication skills by practicing formal email writing and understanding proper online etiquette.

***Approach:**

To complete this task, I wrote two formal emails based on realistic student scenarios:

1. A formal email to a professor requesting an **assignment submission extension**
2. A professional email to an internship coordinator expressing **interest in a summer internship opportunity**

While writing these emails, I focused on the key elements of formal communication such as:

- clear and relevant subject line,
- respectful greeting,
- concise and well-structured body,
- polite closing,
- and professional tone.

In addition to email writing, I also created a **Social Media Do's and Don'ts checklist** to promote responsible and respectful digital behaviour among students.

***Findings:**

This task helped me understand that digital communication is a major part of academic and professional life. I learned that formal emails should always be clear, respectful, and purpose-driven.

I also realized that poor communication, such as sending incomplete, rude, or unclear emails, can create misunderstandings and leave a negative impression. Similarly, careless behaviour on social media can affect a student's image and credibility.

***Reflection:**

This task was important because it showed me that communication skills are just as valuable as technical skills in the digital world.

Whether communicating with professors, internship coordinators, or peers, professional etiquette plays an important role in creating a positive and responsible digital identity.

Task 5 – Cybercrime Awareness Case Study & Prevention Guide

***Objective:**

The objective of this task was to study a real and relevant cybercrime issue, understand how it affects users, and identify practical prevention methods to promote safer digital behaviour.

***Approach:**

For this task, I selected UPI and Online Payment Fraud as the case study topic. I chose this topic because it is highly relevant in India and directly affects students and everyday digital users who frequently use online payment applications.

In this case study, I explored the common methods used by cybercriminals in digital payment fraud, including:

- fake customer care calls,
- suspicious payment links,
- QR code scams,
- OTP sharing requests,
- and fraudulent collect requests.

I also prepared a prevention checklist containing practical safety tips to help users avoid such fraud. In addition, I included official reporting channels such as the National Cyber Crime Portal and Helpline 1930 to highlight the importance of reporting cybercrime incidents.

***Findings:**

This task helped me understand how easily users can become victims of cyber fraud if they act in panic or without verifying digital payment requests carefully. I learned that cybercriminals often use urgency, fear, or trust-based manipulation to deceive users.

One of the most important findings from this task was that even a small mistake, such as sharing an OTP or approving the wrong payment request, can lead to financial loss and misuse of personal information. This made the issue feel more practical and relevant than a purely theoretical cybercrime topic.

***Reflection:**

This task was especially meaningful because it connected digital literacy with digital safety. As a student and a regular user of online payment systems, I understood the importance of cautious digital behaviour and awareness. As a cybersecurity student, this task also strengthened my understanding of how cybercrime affects ordinary users and why prevention awareness is essential.

Conclusion:

This Digital Literacy Project was a practical and informative learning experience that helped me understand the broader meaning of digital literacy in student life. Through the five tasks, I explored different aspects of digital awareness, including content creation, online identity building, technical and collaborative tools, professional communication, and cyber safety.

The project showed that digital literacy is not only about using technology, but also about using it **effectively, responsibly, safely, and professionally**. Each task contributed to a specific area of learning and helped me develop skills that are useful for academics, communication, career development, and personal online security.

Overall, this project improved both my understanding and confidence in using digital platforms meaningfully. It also helped me realize that digital literacy is an essential life skill in today's world and will continue to be valuable throughout my academic and professional journey.
